

Lesson 05 Exercise b – Add Values and ActionModes

Objective

By the end of this exercise, you will be able to enter test data into the TestSteps to steer the SAP GUI.

Why is this important?

At this point, the business information for steering the application must be entered into the TestCase: what objects to click on, where to input text and what text to input, etc. Entering this information into the Value and ActionMode columns allows Tosca to steer and automate the test process.

Instructions

1. Input the values and ActionModes for the TestStepValues as shown below:

TestStepValue	Value	ActionMode
	SAP Logon	
SapLogonPath	Directory path of Installed SAP GUI	Input
SapConnection	IDES EXTERN (Connection Server name)	Input
	SAP Login	
Client	800	Input
User	User Id provided by Tricentis Academy	Input
Password	Password provided by Tricentis Academy	Input
Language	EN	Input
Enter	X	Input

2. Ensure that the password DataType is set to "**Password**".
